SYSTEMS AND PROCEDURES JOURNAL

ANNUAL INDEX OF ARTICLES FOR 1962

January–February

8 **What Management Requires from the Systems Specialist and from the System Itself**
"What systems specialists should require from management is perhaps even more important than what management should require from systems specialists."
Herman Limberg

11 **Mechanizing Higher Education**
". . . a machine doing a job for which it is not fitted can cost and waste more than the people it replaces."
Leo L. Kornfeld

15 **The Real Job of Systems & Procedures**
". . . savings can still be made other than through tabulating equipment or computers."
A. J. Leighton

18 **Let's Look at Work Revolution**
". . . the challenge is intensified for business to keep pace with leadership requirements of this great nation."
Milton Reitzfeld

20 **A Progress Report on Automatic Character Recognition**
"The evaluation of existing systems on the basis of economic justification is not straightforward."
Henry F. Sherwood

29 **Automating Data Input**
". . . a discussion of some of the important, non-technical aspects of developments in the preparation of input data."
Robert B. Johnson

32 **How to Increase Profits**
". . . we lack confidence in our own ability to produce worthwhile results."
Stephen J. Lynch

40 **How a Punched-Card System Helps a Highway Safety Program**
"Punch Cards are an intermediate phase . . ."
Joseph Grillo

March–April

10 **Some Guidelines for Corporate Reorganization**
The objective should always be to achieve the end result through the simplest means, without overlooking the personality and abilities of management.
W. Wallace Muir

14 **How to Win Management's Approval**
The best system in the world has no chance for implementation unless top management will agree. Gaining the necessary backing through proper presentation is the key to installation.
Ralph E. Steere

17 **SDA: Starting Point For ADP**
Applying automation techniques where information originates can be an "open sesame" to a complete ADP system later on.
Maurice F. Ronayne

22 **Applying Pre-determined Time Standards In A Small Company**
Exploring the proposals with representatives from each segment of the company is absolutely essential for success of the program, says the author.
Peter deK. Dusinberre, Jr.

26 **An Integrated Approach To Adminstrative Systems And Data Processing**
The authors compare the total systems approach to the action-level, problem-oriented, traditional systems approach.
E. R. Dickey, N. L. Senensieb, H. C. Robertson

33 **When Is A Record A Record?**
Much has been written about records management, but little about the records themselves. In this article, the author attempts to "get the record straight."
Belden Menkus

36 **Mechanizing Higher Education**
In Part II of an article which began in the previous issue, the author describes seven steps in making a mechanization study upon which a final decision can be based.
Leo L. Kornfeld

May–June

10 **Systems From The Management Viewpoint**
The author categorizes into seven points the requirements of systems and procedures and into three points the responsibilities of management.
H. D. Kenney

14 **A Way To Handle The "Small Jobs"**
"In any systems department, a wealth of nearly untapped manpower . . . lies . . . waiting to be challenged with something more demanding than the usual routine jobs."
Robert L. Shultis

20 **Engineered Office Operations Produce Peak Profits**
The improvement of office operations rests upon a sound engineering approach to every facet of work involved in the processing and flow of paperwork.
C. J. Minnich, Jr.

27 **The Making Of A Systems Man**
An educator presents an answer to the challenge of giving prospective systems men the basic training they need to perform a vital role in the future.
Loren E. Waltz

30 **Procedures Psychoanalyzed; Admissions Accelerated; Occupancy Optimized**
Systems applied to a neglected area meets with success as a large California state hospital completely revises its admissions procedures.
R. Bruce Jordan

34 **The Challenges To The Systems Profession**
In order for the systems field to become a truly recognized profession, the basic requirements of ethics, standards of knowledge, and conceptual pinciples must be met.
N. L. Senensieb

37 **The Feasibility Of Measuring Paperwork**
The results of a study to determine what work measurement techniques are used by most industrial firms are presented in this article.
E. C. Richardson

July–August

10 **To Develop A Priority Of Action For Economic Gain**
This is the basic role of the systems analyst, states the author of a new series of three articles to appear in the **JOURNAL.** It is explained that contributions of the analyst have one ultimate aim: to add to the profitability of the enterprise.
Arthur L. Svenson

16 **How To Increase A Systems Man's Ability To Sell His Ideas To Management**
To overcome resistance to staff men, what they stand for, and change itself requires intelligent, forceful and effective selling techniques. Selling is a continuous process which not only involves the final "sale," but also the establishment of rapport for acceptance.

23 **A Systems Approach Utilizing General-Purpose And Special-Purpose Teaching Machines**
"We can extract the best of teaching machine techniques and the best of training as practiced in job environments, and integrate these physically and operationally into the systems which are now being designed and developed for future operational status."
Leonard C. Silvern

32 **Put "Integrity" Into Business Data**
Since response to information in the data system may cause expensive and incorrect reaction, it is imperative that business data be correct. Three types of errors must be handled: logical error, error in trend and non-compliance with corporate parameters.
E. R. Dickey

September–October

10 **A Rational Approach To Information Retrieval**
Already knee-deep in technical jargon, the relatively new field of information storage and retrieval poses a hazard in that pre-occupation with hardware obscures its basic function—to "file and find."
Robert C. Weisselberg

15 **Crossing The Lines Of Organization**
This can be as risky as the crossing of any enemy line—so risky that in fact it can reverse into a full-scale rout. To avoid being repulsed at the line of company organization, the systems man should establish a unity of purpose on both sides.
Brian V. Rothery

17 **Facsimile May Be The Answer**
If a communications problem is causing your operations to fall short of full effectiveness, perhaps you should look into the latest developments in facsimile transmission.
Carl Heyel

20 **How To Set Standards Of Service In The Office**
"To say that service is 'good' because it is fast, or can respond fast to emergencies, or because there are not too many complaints is not enough. Providing good service means . . . keeping track of exactly what kind of service is being provided, and weighing this against the objectives of the system."
Elmer V. Grillo

26 **To Stress The Essential Primacy Of Business Information**
The second of a three-part series on the role of the systems analyst makes this point: whenever he designs a system, the analyst is working in the realm of organization and dealing with many relationships identified by information.
Arthur L. Svenson

35 **Simplifying Work Simplification**
It's necessary to follow a definite plan of action, says the author, if a program for work simplification is to have any chance for success. This article tells of one such plan.
Alfred L. Palmer

38 **Profiting From Vendors' Quantity Discounts**
A profitable technique to know about is described in this article. It is centered around a generalized arithmetic formula which is capable of wide application, and which reflects the modern, mathematical approach to business problems.
Francis C. Stacey

November–December

8 **Putting CPM To Work**
There is a lot of difference between theory and practice of the new scheduling techniques. The techniques are subtly different and must be experienced to be understood, but once appreciated, will win staunch support from those willing to give them a fair chance.
Alan A. Stern

13 **Improved Application Of Economical Order Quantities**
A carrying cost rate which increases with time and a method of handling price breaks are incorporated in a convenient table to be used for computation of economical order quantities.
William H. Hoffman

16 **Techniques In Controlling Administrative Costs**
Due to the human relations factor, the old techniques of holding down administrative costs will no longer suffice. New kinds of information and new measurements have to be developed before such costs can be fully controlled.
Norbert A. Bohn

22 **Some Characteristics Of Systems Analysts**
Certain characteristics of individuals responsible for analyzing and improving office systems and procedures are identified as a result of a recent regional study in the Los Angeles area.
Jasper J. Sawatzky

24 **To Build Standards Of Systems-Enterprise**
In the concluding installment of a three-part series of articles, the author explains that the realm of the analyst is the business enterprise itself—not a system, not a project, but his full-bodied, three-dimensional company.
Arthur L. Svenson

32 **The Case For Internal Office Reproduction**
The aim of this article is to give management and methods men some clue for handling office reproduction systems, and to dispel the gap in knowledge and misconceptions about the subject.
Johannes S. A. Schroder
